

Vendor Focus

Featuring: Cedar Corporation

Cedar Corporation is about working with local government leaders to improve the communities themselves by making them better places to live.

Cedar Corporation is a Wisconsin-based company that is passionate about helping local units of government with projects that require professional planning, design, and engineering services. Just as town government is closest to its residents, Cedar Corporation gets close to their town clients. It's how they prefer to do business.

Cedar Corporation is well established as a Wisconsin-based design and engineering firm with an understanding of how local town government works. Their corporate culture is in step with towns, villages, and small cities in our state.

Cedar has over 90 employees including 21 professional engineers, two licensed wastewater treatment facility operators, two licensed water system operators, three professional land surveyors, five planners and an economic development specialist. Rounding out the staff are registered professional architects, interior designers, geologists, environmental specialists, grant writers, GIS specialist, and a strong support staff of technicians and administrative personnel. All of them are individuals who take pride in meeting the challenges of the industry to fulfill their customers' every need.

Cedar Corporation has invested a significant amount of time to ensure Wisconsin's towns are able to take advantage of the recent Bi-Partisan Law (BIL) grant program. BIL grants will be competitive and require good detail and planning in the application process.

Be it replacing an aging bridge, designing a wastewater treatment plant, writing a grant or planning for future development, most towns have limited resources and need expertise. Cedar Corporation can help and is well-prepared to assist towns with such projects.

Please reach out to discuss your needs. Cedar can help with all phases from planning to design to bidding to final construction. Cedar will answer questions, seek financial resources, and find solutions.
